Warranty

Koke Inc. warrants its steel yardramp to be fee from structural defects in materials and workmanship for a period of (2) years. The hydraulic pumnp is warranted for a period of (1) year and all cylinders, hoses and fittings are warranted for a period of (6) months.

This warranty covers components used under normal and proper use. Koke Inc. will replace, repair or upgrade any part found to be defective. This warranty will cover parts, labor and freight charges related to its warranty.

Koke Inc. must approve all warranty claims prior to work being performed. If the product is found to be damaged due to abuse, negligence, accident or over capaca-tion, the warranty becomes null and void.

UNLOADING INSTRUCTIONS

2 Forklifts with a capacity of 4000lbs. or greater are needed to unload a yardramp.

1) Place each truck on either side of yard sitting on flatbed
2) Position truck in center of yard ramp so that forks are located near wheel assembly. This is approximately the balancing point.
3) Slide forks under side frame only. Do not slide forks in too for or damage may occur to hydraulics and cylinders.
4) Lift both trucks simultaneously until wheels are off flatbed.
5) have flatbed pulled out from under the yardramp
6) Carefully and slowly, lower yardramp evenly to the ground.

Note: Pump valve is open during transportation. Close valve when unit is off flatbed trailer. Pump can be used to raise yardram to desired height.

OPERATING INSTRUCTIONS

1) Use the fork positioner or optional tow bar at the bottom end of the yardramp to transport ramp by means of forklift truck to desired location. DO NOT TRAVEL AT SPEEDS OVER 5MPH.
2) Hydraulic pump is located in middle of yardramp on the side. Tighten the bleed valve on the pump by turning valve clockwise. Remove handle form its storage compartment and insert handle into socket on pump.
3) TRUCK/TRAILER APPLICATION: With a back and forth motion of the handle, raise the front end of the yardramp until it is above the trailer bed. Back trailer up until bed of trailer is under the lip of the ramp. Turn valve counter clockwise until lip rests on trailer bed. Use load binders to secure ramp to trailer. This procedure can be used for rail car applications as well.
4) DOCK APPLICATIONS: With a back and forth motion of the handle, raise the front end of the yardsramp until lip is above the dock. Turn valve counter clockwise until lip rests on dock.
5) Leave the bleed valve open while using yardramp. This will allow the undercarriage to “float” with the ramp while it is in use.
6) Do not use go over 5mph when traveling up or down yardramp.
7) Inspect yardramp surface before and after using. Surface must be clean from debris, ice and snow before using.

PARTS MANUAL

Part #	Description	Qnty Required
YR-100	Cylinder	2
YR-101	Male to Male Fitting	2
YR-102	3/8” T-fitting	1
YR-103	30” hose with fittings	2
YR-104	3/8” NPT flow control valve	1
YR-105	Male Connector	2
YR-106	60” hose with fittings	1
YR-200	Hydraulic pump w/handle	1
YR-302	18” Cushion Tire & Wheel Assy	2
YR302A	Hub Assembly	2
YR-302B	Nut & Bolt	10
YR-403	Ramp Positioner Complete	1
YR-403A	T-handle	1
YR-403B	Safety Chain	1
