

# Edge of Dock Levelers

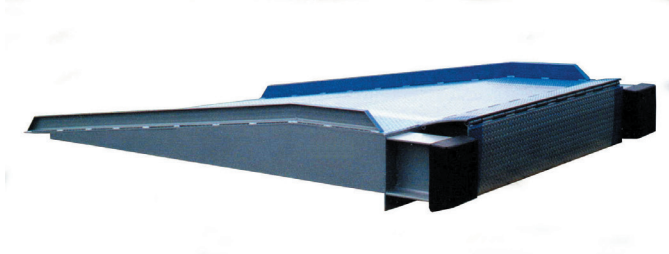

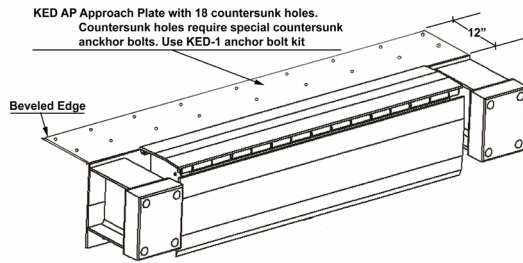

## MECHANICAL SERIES

- Spring assist operating system with bar handle for ease of use
- One piece design that includes bumpers
- Continuous piano hinge front and rear for longevity
- High grade 50,000 psi yield diamondplate
- Beveled lip for smooth transition into truck

## HYDRAULIC SERIES

- Electric-hydraulic design for push button operation
- One piece design that includes bumpers
- Continuous piano hinge front and rear for longevity
- High grade 50,000 psi yield diamondplate
- Beveled lip for smooth transition into truck
- 110V/1PH power standard. Other options available

### Edge of Dock with Approach Plate

Our standard approach plate is 94"W x 12"L and has 18 countersunk holes for mounting. That is more than twice what other manufacturers provide. This guarantees a solid, flush mounting. Approach plates are primarily used for installing an edge of dock where there isn't a steel angle embedded in the concrete to weld to. We offer the option of having the approach plate welded to the edge of dock at the factory. This allows an edge of dock to be installed without the need of having a welder on site.

### Edge of Dock w/ Ramp

Ramps are available for docks lower than 48". They come in different heights to raise the edge of dock up to be within working range of trailers.

MODEL	CAPACITY (LBS.)	USABLE WIDTH	BACKPLATE WIDTH	OVERALL WIDTH	OPERATION	LIP LENGTH	WEIGHT (LBS.)
